

The DAFO 2 Softy has a soft foam liner that surrounds the foot to provide comfortable control of position. Like the standard DAFO 2, it combines full wraparound foot control with a hinged proximal upright, designed to block ankle plantarflexion. The proximal anterior strap comfortably secures the orthosis to the leg. The proximal upright moves unrestricted with the dorsiflexion of the ankle. This brace also provides a great deal of medial/lateral stability in both the stance and swing phases.

Key Features

Custom-fabricated from a cast

Softy liner

made of foam provides more comfortable control of feet that are difficult to align or have sensitive bony prominences

Proximal posterior

blocks plantarflexion and provides additional medial/lateral stability

Full wraparound shell

for flexible control of foot position and alignment

Streamlined and sturdy hinged ankle control

Defined plantar surface contours

Other liner materials are available

including Polyethylene, Co-poly, and OP Flex

Designed for patients who:

- Have excess plantarflexion resulting in moderate to strong toe walking.
- Require tall posterior control for hyperextension of the knee.
- Have excessive pronation or supination.
- Would benefit from the use of a hinged AFO for additional control of medial/lateral alignment.
